

TABLE OF CONTENTS

VOLUME LIX

LARS HÖRMANDER — The wave front set of the fundamental solution of a hyperbolic operator with double characteristics	1
TERUO IKEBE — The Schrödinger operator with a penetrable wall interaction	37
ARNE JENSEN — High energy resolvent estimates for Schrödinger operators in Besov spaces	45
SHOSHANA KAMIN AND JUAN LUIS VAZQUEZ — Singular solutions of some nonlinear parabolic equations	51
YAKAR KANNAI — A hyperbolic approach to elliptic and parabolic singular perturbation problems	75
YURI KIFER — Principal eigenvalues and equilibrium states corresponding to weakly coupled parabolic systems of PDE	89
J. L. LIONS — Remarks on approximate controllability	103
WALTER LITTMAN AND STEPHEN TAYLOR — Smoothing evolution equations and boundary control theory	193
ANDERS MELIN — Trace distributions associated to the Schrödinger operator	133
ROGER D. NUSSBAUM AND YEHUDA PINCHOVER — On variational principles for the generalized principal eigenvalue of second order elliptic operators and some applications	161
R. PHILLIPS AND P. SARNAK — Automorphic spectrum and Fermi's Golden Rule	179
D. ROBERT — On scattering theory for long range perturbations of Laplace operators	189
ROBERT SEELEY — Conic degeneration of the Gauss–Bonnet operator	205
JOHANNES SJÖSTRAND — Infinite systems of potential wells	217
FRANÇOIS TREVES — On the local solvability of certain overdetermined systems of first-order linear PDE	225
LAURENT VERON — Semilinear elliptic equations with uniform blow-up on the boundary	231
GERSHON WOLANSKY — On the evolution of self-interacting clusters and applications to semilinear equations with exponential nonlinearity	251
