## Exam of 04.02.2004 — Solutions

3

3a .....

The two triples  $(X_1, X_2, X_3)$  and  $(X_2, X_1, X_3)$  are identically distributed, therefore  $\mathbb{P}\left(X_1 < X_2 < X_3 < x\right) = \mathbb{P}\left(X_2 < X_1 < X_3 < x\right)$ . The same holds for all the 6 permutations. The sum of these 6 equal probabilities is equal to  $\mathbb{P}\left(X_1 < x, X_2 < x, X_3 < x\right) = \mathbb{P}\left(X_1 < x\right) \cdot \mathbb{P}\left(X_2 < x\right) \cdot \mathbb{P}\left(X_3 < x\right) = x^3$ , therefore each summand is equal to  $x^3/6$ .

3b .....

Y and A are independent, since  $\mathbb{P}(A, Y \leq y) = \mathbb{P}(X_1 < X_2 < \cdots < X_{10} \leq y) = y^{10}/10!$  (similarly to 3a), but also  $\mathbb{P}(A)\mathbb{P}(Y \leq y) = (1/10!)y^{10}$ .

3c .....

 $\mathbb{P} \left( \begin{array}{c|c} N = 3 & X_3 \end{array} \right) = \mathbb{P} \left( \begin{array}{c|c} X_1 < X_2 < X_3, \, X_3 \geq X_4 & X_3 \end{array} \right) = \mathbb{P} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) \mathbb{P} \left( \begin{array}{c|c} X_4 \leq X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) \mathbb{P} \left( \begin{array}{c|c} X_4 \leq X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 < X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 & X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 & X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 & X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 & X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 < X_2 & X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 & X_3 & X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 & X_3 & X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 & X_3 & X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 & X_3 & X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 & X_3 & X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 & X_3 & X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 & X_3 & X_3 & X_3 \end{array} \right) = \mathbb{E} \left( \begin{array}{c|c} X_1 & X_3 & X_3 &$ 

3d .....

$$f_{Y|N=3}(y) = f_{X_3|N=3}(y) = \frac{\mathbb{P}(N=3|X_3=y) f_{X_3}(y)}{\mathbb{P}(N=3)} = \frac{\frac{1}{2}y^3 \cdot 1}{\frac{1}{8}} = 4y^3$$

for  $y \in (0, 1)$ .

3e .....

As before,  $\mathbb{P}\left(N=n \mid X_n\right) = \mathbb{P}\left(X_1 < \dots < X_{n-1} < X_n, X_n \ge X_{n+1} \mid X_n\right) = \mathbb{P}\left(X_1 < \dots < X_{n-1} < X_n, X_n \ge X_{n+1} \mid X_n\right) = \mathbb{P}\left(X_1 < \dots < X_{n-1} < X_n \mid X_n\right) = \mathbb{P}\left(X_{n+1} \le X_n \mid X_n\right) = \frac{1}{(n-1)!}X_n^{n-1} \cdot X_n = \frac{1}{(n-1)!}X_n^n;$   $\mathbb{P}\left(N=n\right) = \mathbb{E}\mathbb{P}\left(N=n \mid X_n\right) = \mathbb{E}\frac{1}{(n-1)!}X_n^n = \frac{1}{(n-1)!}\int_0^1 x^n dx = \frac{1}{(n-1)!(n+1)};$ 

$$f_{Y|N=n}(y) = f_{X_n|N=n}(y) = \frac{\mathbb{P}\left(N = n \mid X_n = y\right) f_{X_n}(y)}{\mathbb{P}\left(N = n\right)} = \frac{\frac{1}{(n-1)!}y^n \cdot 1}{\frac{1}{(n-1)!(n+1)}} = (n+1)y^n$$

for  $y \in (0, 1)$ .

3f .....

First,  $f_Y(y) = \sum_{n=1}^{\infty} f_{Y|N=n}(y) \cdot \mathbb{P}\left(N=n\right) = \sum_{n=1}^{\infty} (n+1)y^n \cdot \frac{1}{(n-1)!(n+1)} = y \sum_{n=1}^{\infty} \frac{y^{n-1}}{(n-1)!} = ye^y$ .

Second,

$$p_{N|Y=y}(n) = \frac{f_{Y|N=n}(y) \cdot \mathbb{P}\left(N=n\right)}{f_{Y}(y)} = \frac{(n+1)y^{n} \cdot \frac{1}{(n-1)!(n+1)}}{ye^{y}} = \frac{y^{n-1}}{(n-1)!}e^{-y}.$$

Third,  $\mathbb{P}\left(N-1=k\mid Y=y\right)=\mathbb{P}\left(N=k+1\mid Y=y\right)=\frac{y^k}{k!}e^{-y}$ , which is the Poisson distribution with parameter y. No,  $\mathbb{P}\left(N=n\mid Y=y\right)\neq\mathbb{P}\left(N=n\mid X_n=y\right)$  in general, since  $\frac{y^{n-1}}{(n-1)!}e^{-y}\neq\frac{1}{(n-1)!}y^n$ .
